SUMMARY

AI/ML Engineer and Data Scientist with 4+ years of experience building production-grade AI systems, scalable ML infrastructure, and enterprise automation solutions. Specialized in Generative AI, MLOps, real-time decision systems, and AI-powered workflow automation using FastAPI, Python, PostgreSQL, AWS, and Azure. Developed AI-driven funding automation platform reducing approval turnaround time from 24 hours to under 7 minutes through intelligent decisioning, ML workflows, and large-scale enterprise integrations

EDUCATION

Boston University | Master of Science in Data Science | GPA: 3.60/4.00

Sep 2024 – Jan 2026

Fairleigh Dickinson University | Bachelor of Science in Computer Science | GPA: 3.69/4.00

Aug 2017 – May 2021

SKILLS

AI/ML & GenAI: Generative AI, Retrieval-Augmented Generation (RAG), LLM Applications, Prompt Engineering, NLP, Transformer Models (GPT, BERT, Claude), Predictive Modeling, Deep Learning, Sentiment Analysis, Classification, Clustering, Time Series Forecasting

MLOps & AI Engineering: FastAPI, Docker, Kubernetes, CI/CD, Jenkins, Terraform, Model Deployment, Model Monitoring, AI Workflow Automation, Real-Time Inference Systems, Vector Databases (FAISS), Redis

Data Engineering & Cloud: Python, SQL, PostgreSQL, Azure (Synapse, Data Factory, Event Hubs, ML Studio), AWS (EC2, ECS, S3, RDS), Spark, ETL Pipelines, Data Warehousing, Streaming Pipelines

Analytics & Visualization: Power BI, Tableau, EDA, Feature Engineering, Statistical Analysis, Hypothesis Testing, A/B Testing

Tools & Platforms: Git, GitHub, Postman, JIRA, Streamlit, Cursor, Salesforce, Claude

WORK EXPERIENCE

One Park Financial

May 2026 – Present

AI Engineer

Ahmedabad, Gujarat, India

- Led AI driven funding automation platform reducing approval TAT from 24 hours to under 7 minutes for financing workflows.
- Engineered ML-powered offer generation and underwriting pipelines integrating internal pricing and AI decision systems.
- Integrated Salesforce, Onfido, Experian, Equifax, DataMerch, and CLEAR APIs automating onboarding, verification, and risk evaluation.
- Built FastAPI, Python, and PostgreSQL backend services enabling automated lead ingestion, decisioning, and funding workflows.
- Contributed to enterprise AI initiative using Cursor, Claude, and cloud automation tools improving deployment efficiency and scalability.

GoCreation

Mar 2026 – May 2026

AI/ML Freelance Consultant

Ahmedabad, Gujarat, India

- Built WhatsApp AI sales agent using Claude API and prompt orchestration for automated lead qualification.
- Designed hybrid LLM workflows enabling slot extraction, business-rule enforcement, and personalized recommendations.
- Developed Flask, PostgreSQL, Meta API, and React infrastructure delivering scalable AI automation at near-zero cost.

Petpooja (Restaurant POS Software)

Jun 2025 – Jul 2025

Data Science Intern

Ahmedabad, Gujarat, India

- Enhanced analytics dashboards (sales, inventory, taxation, staffing), improving reporting speed by 40%.
- Built aggregation logic for city/outlet-level data, boosting monitoring efficiency across 100+ outlets.
- Modeled user order flows and behavior, informing UI/UX updates that improved conversions by 15%.
- Explored ML-based tax categorization methods, reducing reporting errors by 25%.

General Motors

Jul 2021 – Jun 2024

Data Scientist

Warren, Michigan, USA

- Built and deployed 15+ production APIs leveraging vehicle telemetry and OnStar data supporting 30,000+ enterprise users.
- Engineered scalable ETL and real-time analytics pipelines reducing reporting latency by 20% across business platforms.
- Developed CI/CD workflows on Azure improving deployment efficiency by 85% and increasing production reliability.
- Designed interactive dashboards and KPI reporting systems enabling data-driven operational and product decisions.
- Implemented enterprise-scale validation and anomaly detection frameworks maintaining 95%+ data accuracy across analytics systems.
- Authored 100+ automated testing and validation workflows reducing reporting inconsistencies and improving issue detection by 25%.

PROJECTS

Enterprise AI Platform: Risk Intelligence with Scalable RAG | [App](#) | [Code](#)

Dec 2025 – Jan 2026

- Architected RAG system with FAISS vector database demonstrating scalable document intelligence for enterprise applications.
- Optimized deployment on AWS EC2 achieving 83% memory efficiency and \$0/month operational cost through containerization/caching.
- Implemented multi-LLM service with intelligent routing showcasing adaptable AI inference architecture with <1s response time.
- Deployed production MLOps infrastructure with Docker, FastAPI, Redis, and CI/CD, enabling domain adaptation and real-time analytics.

Multi-Factor Financial Analytics Engine | [App](#) | [Code](#)

Mar 2025 – May 2025

- Built real-time sentiment analysis pipeline processing Twitter and news data using NLP techniques.
- Engineered scoring system combining sentiment, fundamentals, and technical indicators with customizable weights.
- Created interactive dashboard enabling stock comparison across 10+ financial dimensions with Buy/Hold/Sell signals.

Environmental Health Risk Prediction Platform | [Code](#) | [Dashboard](#)

Mar 2025 – May 2025

- Built ML models predicting hospitalization risks with 54.8% accuracy using real-time air quality and environmental data.
- Engineered cloud data pipeline on Azure processing batch and streaming data with Data Factory and Event Hubs.
- Created interactive dashboard with Power BI enabling proactive public health interventions and automated alerts.
